AHMAD MARWAN ALMAGHAIREH

Cybersecurity Student | Aspiring SOC Analyst & Penetration Tester | Security Researcher

+962 770 324 310 | ahmadceh317@gmail.com | LinkedIn | GitHub | TryHackMe | Amman, Jordan

SUMMARY

Cybersecurity undergraduate at Al Hussein Technical University (GPA 3.7/4.0), graduating February 2027 in 3.5 years — six months ahead of schedule. Hands-on experience in penetration testing, ethical hacking, network security, secure coding, browser automation, and AI-driven threat detection. Academic researcher in privacy-preserving explainable phishing detection (XGBoost + SHAP). Top 15% globally on TryHackMe with 35+ rooms completed. Award-winning creator of SecureMidea, recognized at Jordan's 2025 National Cybersecurity & AI Competition. Seeking a cybersecurity internship or junior SOC/pen-test role.

TECHNICAL SKILLS

Offensive Security: Penetration Testing · Ethical Hacking · OWASP Top 10 · SQL Injection · XSS · CSRF · Privilege Escalation · Vulnerability Assessment · Nmap · Metasploit · Burp Suite · CEH Techniques

Defensive / SOC: Network Security · Firewall Configuration · Intrusion Detection · Log Analysis · Risk Analysis · Cryptography · Hashing · Secure Coding · Wireshark · Digital Forensics · SIEM (academic)

AI & Security Research: XGBoost · SHAP Explainability · NLP · Hugging Face Transformers · AraBERT · FastAPI · OpenAI API · Feature Engineering

Automation & Scripting: Python · Playwright · Web Scraping · Browser Automation · GitHub Actions · Telegram Bot API · REST APIs · Bash

Programming & Tools: Python · Java · JavaScript · PHP · SQL · HTML/CSS · Kali Linux · Linux · Windows · Git · GitHub · VS Code · XAMPP

RESEARCH

Phishing Detection Using Explainable URL-Based Analysis *2025 – 2026*

Academic Research Paper · Computing Research Project, Al Hussein Technical University | View Paper

A Lightweight, Privacy-Preserving Offline Phishing Detection System

- Designed a fully offline, client-side phishing URL detection system using XGBoost trained on intrinsic URL-based lexical and structural features — achieving 99.93% accuracy with phishing miss rate and false-alarm rate both below 0.1%, with millisecond-level inference latency.
- Integrated SHAP (SHapley Additive Explanations) for post-hoc interpretability, delivering both global feature importance and local per-prediction explanations — addressing the black-box limitation common in high-performing phishing models.
- Validated through a prototype browser extension performing real-time on-device inference with non-intrusive inline warnings, eliminating all dependence on cloud services or external reputation APIs.

PROJECTS

SecureMidea — AI-Powered Threat Detection Tool *2024 – 2025*

Lead Developer & AI Security Researcher | github.com/AhmadM962/Secure_Midea

- Chrome extension with a FastAPI backend that classifies Arabic Instagram comments in real time using the AraBERT NLP transformer model to detect politically manipulative and bot-generated content.
- Applied secure API design (CORS policy, structured error handling) and ML inference pipeline integration; demonstrates NLP-based threat detection aligned with real-world content security use cases.
- 2nd Place — Creative Cybersecurity & AI Competition, Al-Zaytoonah University (2025). Selected presenter at the 2025 Tawasul Forum — Jordan's national technology & innovation conference.

Stack: Python · FastAPI · JavaScript · Hugging Face · AraBERT · Chrome Extensions · REST API

Automation Scripting Tools *2023 – 2025*

Developer | Course Checker | Tawjihi Checker

- Course Checker: Built a Python automation tool using Playwright that monitors the HTU Student Information System, auto-detects when a target course section opens, and sends real-time burst notifications via the Telegram Bot API — deployed on GitHub Actions with 5-minute scheduled checks.
- Tawjihi Checker: Developed a web monitoring script that continuously polls the Tawjihi results portal for availability and triggers an audio alarm the instant the site goes live — enabling first-mover access to national exam results.

Stack: Python · Playwright · GitHub Actions · Telegram Bot API · Web Scraping · Requests · Browser Automation

Cybersecurity Lab Projects (10+) *2023 – 2025*

Security Analyst & Developer | github.com/AhmadM962/my-projects

- Penetration testing labs covering SQL injection, XSS, CSRF, privilege escalation, and OWASP Top 10 exploitation in controlled environments using CEH-aligned methodology.
- Firewall rule configuration, Wireshark packet capture, intrusion detection, and secure application development in Python and Java with authentication hardening and input sanitization.

Stack: Python · Java · SQL · Kali Linux · Wireshark · Nmap · Bash · CEH Techniques

LawyerGPT — Secure AI Web Application *2024*

Full-Stack Developer (Security Focus) | lawyergpt.online | GitHub

- Production-deployed PHP/MySQL web app integrating OpenAI API; implemented session-based authentication, SQL injection prevention, HTTPS enforcement, and OWASP-aligned input sanitization.

Stack: PHP · MySQL · JavaScript · HTML/CSS · OpenAI API · Git · Apache · HTTPS

E D U C A T I O N

Al Hussein Technical University (HTU) *Amman, Jordan*

B.Sc. in Cybersecurity Expected Feb 2027 — 3.5-year accelerated completion (6 months ahead of schedule)

- **GPA: 3.7 / 4.0** — Consistent academic excellence throughout the program
- Relevant Coursework: Ethical Hacking · Network Security · Cryptography · Information Security · Risk Analysis & Systems Testing · AI & Intelligent Systems · Database Design · Data Structures & Algorithms · Operating Systems · Software Development Lifecycle · Computing Research Project

High School — Scientific Stream (Tawjihi) *Jordan*

Score: **96.7%**

A W A R D S & A C T I V I T I E S

2nd Place — Creative Cybersecurity & AI Idea Competition · Al-Zaytoonah University *2025*

National Presenter — Tawasul Forum · Selected to present SecureMidea at Jordan's national technology & innovation conference *2025*

TryHackMe — Top 15% Globally · 35+ rooms across penetration testing, network security, cryptography, web exploitation, Windows/Linux fundamentals, digital forensics, and SOC operations | tryhackme.com/p/Ahmad147
